Course status: <input type="checkbox"/> compulsory <input checked="" type="checkbox"/> elective			
Course Leader: Assist. Prof. Krunoslav Antoliš			
Co-instructors: Simona Strmečki, senior lecturer			
Course outline:			
Introduce to the digital techniques and digital technologies. Techniques of surveillance, informants, undercover operations and electronic devices. Basic understanding, identifying, storing and transporting original digital evidence. Using basic DOS commands in computer crime investigations. Analysis of Windows systems. UNIX system analysis. Network analysis and on-line technologies. Exercises in the examples of child pornography investigation (understanding and using internet services including e-mail, newsgroups, WWW, chat and instant messages), in internet gambling investigations and description of some encryption algorithms.			
Course objective:			
Understand the principles of computer crime investigations, identify key sources, their comparison and significant differences; public available information in different areas of the internet, how to extract and evaluate relevant data, understand evidence dynamics (changes, relocations, obscurities, obliterations of evidence) and forensic tools and technologies.			
Teaching methods:
